

Message from the Chairman

It has been pleasing to note that more new members have joined PSSA since our last newsletter was published in February, adding to our credibility as THE trade association for quality providers and installers of independently tested high security perimeter protection products. As word of our organisation spreads we have also seen a significant increase in enquiries, of all types, from organisations looking for assistance with perimeter protection. This has been particularly noticeable since the recent terrorist attack at Westminster which sadly resulted in both injury and loss of life.

Since our last newsletter, we held in March, our incredibly successful, and sold out, career development day in association with CPNI and I would like here to thank again the CPNI team who gave us all such an informative day. Work has also moved on with regards to revamping the PSSA Verification scheme via our specialist sub committee and we hope that this will conclude soon with a revised scheme that still provides value for the end market but which is more affordable for the participating businesses. Marketing of PSSA continues as per our marketing plan and, as part of which, we will be exhibiting at Security & Counter Terror Expo in May.

Finally, we are now very close to being able to make an announcement about a major new initiative that is in the interest of our industry as a whole but which still has a few minor issues to resolve before we can do so. Watch this space! ■

INCIDENCE OF VEHICLE BORNE ATTACKS UNDERLINES VALUE OF PSSA

Berlin, Nice, London, Stockholm should be known as possible stop offs as part of a backpacker's European itinerary. As we now know, however, these are places now associated with vehicle borne attacks – or more precisely indicative of a rise in the use of vehicles as a weapon.

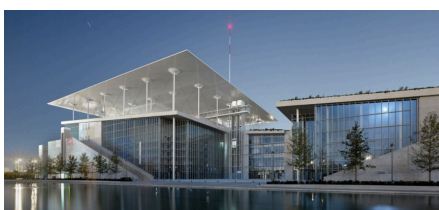

The PSSA fields enquiries from those responsible for security at public venues and corporate sites, who are anxious to get the best advice and source the right Hostile Vehicle Mitigation (HVM) products.

The PSSA values its relationship with the Centre for the Protection of National Infrastructure (CPNI), which provided a tailored training session for members and others earlier this year. This helps all parties to understand the nature of terrorist threats and for products to be developed that can counter them.

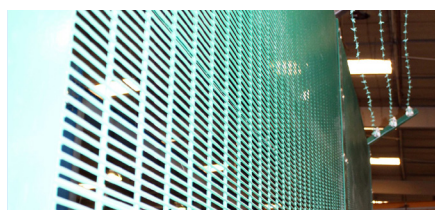

There is likely to be a growing role for the PSSA in providing or signposting information in a time when there is an acute awareness of the threat to property and people. ■

PSSA Member News

New Member: Hill and Smith Bristorm

Bristorm have re-joined the PSSA after a short absence. They are specialists in the design and manufacture of Hostile Vehicle Mitigation systems suitable for securing large high-profile sites, perimeters and borders. Over recent years, their product quality and product performance has been recognised worldwide and they have developed a respected brand across the UK and the Middle East.

Bristorm is the security division of Hill and Smith Limited whose history dates back to 1824. Hill and Smith have unprecedented experience in the development of highway crash barriers and infrastructure products and over the years have innovated to meet the demands of the changing environment. Hill and Smith Limited are members of the Hill and Smith Holdings (PLC) Infrastructure Products Group; the international group has subsidiary companies across the world each equally renowned for maintaining the group's efforts in achieving high quality and high product performance throughout. Being a member of the Hill & Smith Holdings PLC results in their stringent compliance with all necessary ISO certifications, including: ISO 9001:2008,

ISO 14001:2004, PAS 99:2012 and OHSAS 19001:2007.

Bristorm were welcomed to the group in 2007 and utilised the Hill and Smith wire rope technologies to develop an innovative range of Hostile Vehicle Mitigation, anti-vehicle fences. These novel 'Bristorm' solutions have experienced unrivalled levels of success and the differing levels of protection makes them cost-effective yet appropriate solutions for securing borders and site perimeters. Bristorm's latest anti vehicle wire rope fence offers zero penetration and zero major debris, a first for the UK.

Bristorm's current range of anti-vehicle fence and bollards provide effective counter terror protection when high level perimeter

security is required. However, in line with the current threat, Bristorm have developed a range of PAS 68 Street Furniture products and a selection of Impeder Bollard Sleeves that are all aesthetically pleasing. Their range maintains their crash rated performance making them suitable counter terror measures for city centres, the street scene and commercial and industrial sites. Their range includes: planters, living walls and cycle hoops.

All Bristorm products are tested at MIRA and TRL to PAS 68, IWA 14 and ASTM F2656. Their range thus far is inclusive of: Anti Vehicle Perimeter Fencing, Anti Vehicle Impeder Bollards, Temporary Wire Rope Security, Combined Wire Rope and Mesh Fencing, Heavy Duty Security Fencing, PAS 68 Street Furniture and Impeder Bollard Sleeve Covers. ■

PSSA INPUT INTO INDUSTRIAL STRATEGY CONSULTATION

Earlier this year the government published a Green Paper, Building an Industrial Strategy. Trade associations and companies were invited to respond with their thoughts on the key policy areas, or "pillars", that the government had identified as being fundamental to the success of the UK economy.

The PSSA provided its input via its membership of the UK's Security and Resilience Industry Suppliers Community (RISC). RISC is an inclusive alliance of trade associations and bodies which represent the UK's security and resilience sector.

The purpose of RISC is to act as an umbrella association in order to reduce the fragmented way in which the Government engages with the security and resilience sector, and to work with Government through the Home Office (Office for Security and Counter Terrorism) and other departments and agencies, on national security and resilience issues.

The RISC response included suggestions for priority areas for science, research and innovation investment, for what the UK can do to create an environment that supports the commercialisation of ideas, how innovation can be encouraged through public procurement and how government can improve its support for new and existing exporters.

Rob Oliver, PSSA

"The Green Paper sets out a structure for the development of government policy and is welcome. However, it is one thing to recognise that as a country "we must to better" and another as to how we do it. The Industrial Strategy is likely to be the work of a full parliament and we will keep PSSA members briefed on initiatives which may benefit their businesses." ■

10 Pillars of Industrial Strategy

1. Investing in science, research and innovation.
2. Developing skills.
3. Upgrading infrastructure.
4. Supporting businesses to start and grow.
5. Improving procurement.
6. Encouraging trade and inward investment.
7. Delivering affordable energy and clean growth.
8. Cultivating world-leading sectors.
9. Driving growth across the whole country.
10. Creating the right institutions to bring together sectors and places.

PSSA Member News

Crime & Fire and Zaun help secure British gas distribution

One of the UK's largest gas distributors has appointed a turnkey security systems integrator and their security fencing supplier to a framework agreement.

Crime & Fire Defence Systems and Zaun are celebrating completion of the first 15 sites throughout the country at strategically important locations.

The gas distributor has saved hundreds of thousands of pounds with the new agreement, as well as yielding the benefits of dedicated account management, certified and experienced perimeter protection designers, engineers and technicians, access to new and innovative products and robust management reporting linked to an exacting service level agreement.

Crime & Fire has worked with the gas distributor for many years to develop the turnkey security solution across the network. It includes the integration of on-site physical security, access control, CCTV cameras, electronics, reporting systems and networks that enable remote monitoring from a central control station.

The perimeter of the site consists of PSSA member Zaun's ArmaWeave fencing, either buried into a concrete cill or a pea-shingle base for smaller sites. Electric fencing is also incorporated into the fencing system along with bespoke Zaun high security gates and locking, all installed by Crime & Fire.

Crime & Fire MD and founder Chris Laughton

"The opportunities in gas distribution and across the utilities sector are immense as the need to protect our critical national infrastructure becomes ever more important."

ArmaWeave achieves the highest rated standards for fencing products defending against forcible attack and can be combined with other intruder systems, electronics and access control to create the optimum integrated fencing solution. Its unique properties add substantial resistance to cutting attacks with hand, powered and non-contact tools. The tight mesh pattern provides no climbing aids, again limiting the potential for intrusion.

The mesh pattern allows the fence to be raked, limiting the need for stepping panels across undulations in ground levels. The mesh still conforms to the high standard but reduces installation costs significantly compared with standard welded mesh systems. ■

Hostile Vehicle Mitigation Specialist Secures Greek Cultural Centre

Award-winning security manufacturer, Heald Ltd, has completed the installation of its revolutionary surface mount sliding bollard solution, the HT2-Matador 3, at the Stavros Niarchos Foundation Cultural Centre in Athens.

In 2016, Heald were approached by Caramondani Bros Public Company Ltd, who required a **surface-mount** perimeter security solution to meet both the protection and architectural needs of their newest development project, the **Stavros Niarchos**

Foundation Cultural Centre (SNFCC).

The **HT-2 Matador 3** was implemented on site, meeting the need for a surface-mount solution which would complement and blend in with the architectural design, whilst at the same time providing the highest level of security. **The HT-2 Matador 3 has been tested to stop a 7.2-tonne truck travelling at 64 kph (40mph),** whilst providing a **zero-penetration** rating and continuing to be **fully operational** afterwards.

The site's security was especially important

because the venue hosts many significant, high-profile events, which are regularly attended by VIPs. An example of such an event was **President Obama's** speech at the SNFCC Opera, during his recent visit to Greece in November 2016.

General Manager of Caramondani Bros Public Company Ltd, Erina Caramondani

"The entire Heald team are very professional. We had full technical support and we were very pleased with their responses to our queries as well as with their response time. The product itself is made of very high-quality materials and it has been functioning without any problems since its installation in March 2016."

Heald's Managing Director, Debbie Heald

"Heald were proud to be chosen to assist in the security of this prestigious site. Our offering of shallow and surface mount technology is unique, giving the customer ease of installation and peace of mind when it comes to security and product longevity. We are pleased to have once again proven the quality of our product." ■

Middle East contract spawns Zaun flat-panel masterpiece

A massive Middle Eastern contract has given rise to a new flat-panel mesh security fence from PSSA member Zaun Limited.

Zaun has designed a variant of its original HiSec '358' welded mesh configuration with an extra wire every 250mm on the inside to enhance security and keep the panel flat without the need for rails or pressed V-beams.

The British manufacturer will ship a staggering 200-plus 40ft containers of the new HiSec Plus panels over the coming year to secure a Middle Eastern site of critical national infrastructure.

The first six containers have left the manufacturer's Wolverhampton headquarters with a further six set to leave before Easter.

The design department has offset the additional 4mm wires – setting quite a challenge to the production team – to enhance the security characteristics and make the single panel act almost like a dual skin fence.

Zaun research and development manager Adam Christie

"It's brilliant to see this new system coming off the production line as it's been more than four years in the making.

"The customer had a very clear specification of what they wanted, but we've been able to work with them over time to make enhancements and to reassure them at every step of the way on quality, design, production, sourcing and logistics."

The additional horizontal wires of HiSec Plus remove the typical bowing of traditional 358, while the 2.4m-high fence line is further secured with stainless steel razor coil topping and coated barbed wire as line wires.

The panels are bolted to 5mm-thick cold-rolled steel posts, which are being welded to steel base plates at Zaun by a new robot welder bought specifically for the task, with each post and base plate a massive 75kg in dead weight.

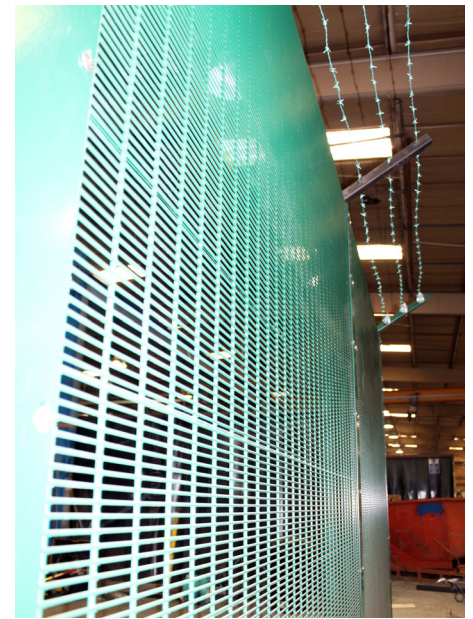

The rolled steel is folded back on the front attack-prone flange of the post to create an effective 10mm thickness of steel. The post assemblies are then bolted in the field to a continuous concrete beam.

The enhanced HiSec specification and fencing system cements Zaun's ability to deliver bespoke high-security fencing solutions.

Zaun's HiSec 358 is approved by NOMS for use in HM Prison Service where this mesh type is used prolifically due to its tight mesh

formation and the fact it can go to 5.2m in height in a single panel.

It can easily be integrated with different toppings, as in this case, and with CCTV, PIDs and other electronic security enhancements. ■

Security infrastructure expert releases perimeter protection guide

Concrete Barriers HQ has released a comprehensive guide to perimeter protection.

The downloadable guide has been created to provide specification and procurement professionals with essential information on how to maximise the effectiveness of perimeter security installations.

It addresses the risks posed by vehicle incursion, including vehicle-borne improvised explosive devices, and includes advice from The National Counter Terrorism Security Office on what to do if you believe premises may be at risk.

The guide, available to download from www.concretebarriershq.co.uk, also includes information on key security standards such as PAS 68 and key points to consider before investing in perimeter protection.

Jonathan Goss, managing director of Concrete Barriers HQ the hostile vehicle defence division of Townscape Products

"We've seen a disturbing increase in the use of vehicles in attacks targeting civilians in the UK and across Europe, making effective perimeter security more important than ever.

"To ensure security infrastructure installed on streets and around buildings to improve safety and deter malicious attacks is

effective as possible, those investing in the installations need to have access to detailed information.

"They need to know about the different options available to them, key security considerations underpinning any perimeter protection installation and the importance of industry quality standards such as PAS 68.

"Ultimately having this information will ensure that perimeter security installations specified are as effective as possible and have the capability to provide a robust deterrent to security threats.

"The purpose of this guide is to make this vital information freely available to anyone looking to gather more information about perimeter security."

For more information about hostile vehicle mitigation and perimeter security installations visit www.concretebarriershq.co.uk. ■

Cova Security Gates wins Manufacturing Business of the Year 2017 and celebrates three decades of success

Cova Security Gates, the leading manufacturer of quality perimeter security equipment, has been awarded Manufacturing Business of the Year 2017 at the prestigious Gatwick Diamond Business Awards. Being recognised for its continued innovation and commitment to customer service in this way comes at a significant time for Cova, with the company celebrating its 30th year in business.

Sponsor and judge of the Manufacturing Business of the Year category, Neil Gardner from asb law LLP

"The judges from asb law selected Cova for this Award having been highly impressed with their ambition, added value and attractiveness. The business has a strong management team in place delivering and

investing in a well-resourced strategic plan. Its manufacturing facility provides flexibility and innovation in the production of bespoke products, with an approach centred on health & safety, quality and efficiency. For a smaller business, their approach to governance, process and the manufacturing environment is remarkable."

Commenting on the company's win, Karen Deacon - Marketing Manager at Cova Security Gates – said: "It means a lot to receive such public recognition from Gatwick Diamond Business, especially at a time when we're celebrating our 30th anniversary. Listening to our customers to ensure we adapt our products and services to meet their ever-changing needs has been key to our success over the past three decades, so it's fantastic to have this acknowledged. On behalf of the whole team I'd like to say a huge thank you to the judges who recognised our passion and commitment to our industry, our customers for their continued trust and support, and our team for working so hard to make Cova Security Gates one of the global leaders in the manufacture of quality perimeter security equipment."

Cova Security Gates specialises in the manufacture of bi-folding speed gates, sliding cantilevered gates, shallow mount road blockers, full depth road blockers, static bollards, rising bollards, barriers, boom barriers and pedestrian gates. With the constant threat of criminal and terrorist attack, Cova Security Gates' PAS 68:2010 compliant crash rated range of products has been developed and installed to counter vehicle borne explosive attacks to critical national infrastructure, as well as to protect other high profile sites around the world.

John Benton, Managing Director at Building Defence Systems

"I'm not surprised to hear that Cova Security Gates has won this award as they've always supported my projects exceptionally. We choose Cova as our preferred partner as we can trust them to deliver what they promise – exceptional quality, robust products alongside a hassle-free, turnkey solution, from the design, manufacture and installation process, right through to after sales support and maintenance packages."

The Gatwick Diamond Business Awards celebrate people and businesses which have shown innovation and inspiration in their work, and have demonstrated a real commitment to the sub-region. The awards have become a major fixture on the region's business calendar, celebrating the best companies and business leaders across the Gatwick Diamond. This year's winners were unveiled at the 9th Annual Gatwick Diamond Business Awards at the Effingham Park Hotel, on 16 March, 2017. The Awards were presented by the well-known writer, comedian and actor Stephen Mangan. ■

PSSA Standards

Are you aware and up to date with the General Data Protection Regulation?

It's less than 18 months until the General Data Protection Regulation (GDPR) goes into effect. Are you ready? If you're like most organisations, the answer is probably no.

But with 100% compliance required on May 25, 2018, and fines of up to 2-4% of global revenue for non-compliance, the pressure is on to comply.

Under the General Data Protection Regulation (GDPR), the data protection principles set out the main responsibilities for organisations.

The principles are similar to those in the Data Protection Agreement (DPA), with added detail at certain points and a new accountability requirement. The GDPR does not have principles relating to individuals' rights or overseas transfers of personal data - these are specifically addressed in separate articles (see GDPR Chapter III and Chapter V respectively).

The most significant addition is the accountability principle. The GDPR requires you to show how you comply with the principles - for example by documenting the decisions you take about a processing activity.

Article 5 of the GDPR requires that personal data shall be:

(a) processed lawfully, fairly and in a transparent manner in relation to individuals;

(b) collected for specified, explicit and legitimate purposes and not further processed in a manner that is incompatible with those purposes; further processing for archiving purposes in the public interest, scientific or historical research purposes or statistical purposes shall not be considered to be incompatible with the initial purposes;

(c) adequate, relevant and limited to what is necessary in relation to the purposes for which they are processed;

(d) accurate and, where necessary, kept up to date; every reasonable step must be taken to ensure that personal data that are inaccurate, having regard to the purposes for which they are processed, are erased or rectified without delay;

(e) kept in a form which permits identification of data subjects for no longer than is necessary for the purposes for which the personal data are processed; personal data may be stored for longer periods insofar as the personal data will be processed solely for archiving purposes in the public interest, scientific or historical research

purposes or statistical purposes subject to implementation of the appropriate technical and organisational measures required by the GDPR in order to safeguard the rights and freedoms of individuals;

(f) processed in a manner that ensures appropriate security of the personal data, including protection against unauthorised or unlawful processing and against accidental loss, destruction or damage, using appropriate technical or organisational measures.

Article 5(2) requires that:

"the controller shall be responsible for, and be able to demonstrate, compliance with the principles." ■

The Bottom Line!

- Understand your obligations under the GDPR
- Don't leave it late
- Don't get caught out.

SPOTLIGHT ON LISA

Lisa Bainbridge joined the PSSA office last autumn after a career which has given her experience in both marketing and the construction world.

Q. What companies have you been with in the past?

Trafalgar House, Kvaerner, Skanska and Totty Construction to name a few.

Q. How have you enjoyed the PSSA experience so far?

I'm fast learning the different products that members manufacturer, supply and install plus understanding the current highlighted vehicle borne threats with interest. Also the crux of the back office, managing memberships, renewals and general enquiries, I'm finding it a very varied role, which is enjoyable and still able to

incorporate my marketing head. Thoroughly enjoyed visiting HORIBA MIRA as being a petrol head speedster it was fascinating watching the vehicles outside. Sorry listening to the CPNI presentation!

Q. What projects have you been working on?

So far I've worked on finalising the PSSA website, organising exhibitions at Olympia for UK Security Expo and Security and Counter Terror Expo plus earlier this year the PSSA CPNI Education Day.

Q. What do you think the PSSA should be tackling in the future?

My personal view is that we need to be raising awareness of the association and members, to large event venues, city councils, major corporations especially those with production facilities, and architects and designers which require the benefit of

member products and knowledge in the initial design stages of projects. This would enable that perimeter / pedestrian protection is at the forefront of construction design and not an afterthought.

Q. Away from the office how do you spend your time?

Few of you may know that I'm a keen horse endurance rider and Ultra Fell runner, this year I've completed a 31 and 55 mile Ultras along with 2 Hardmoors Marathons, only another 7 and a 60 mile Ultra to go this year.

Do you have an interesting story to tell or fancy being the spotlight in the next issue? email: admin@pssasecurity.org

PSSA Legal Obligations

THE MYSTERIOUS ISSUES SURROUNDING CE MARKING

CE Marking is mandatory for a wide variety of products including all electrical / electronic devices, allowing manufacturers to import and export their products freely within the European Union, with common product design and manufacturing requirements defined within EU Directives

By placing the mandatory conformity mark on a product, manufacturers (or if outside of the EU, the importer or authorised representative) are providing a clear indication that it meets all the relevant requirements and should therefore enjoy free movement between all 28 Member states.

Problems with the CE Mark

More recently Europe has witnessed an increasing number of products incorrectly marked with the CE Mark which have come onto the market from foreign countries. There are reasons for this which can be summarized as:

There has been a lot of confusion around the CE Mark itself with similar marks from China often confusing consumers and being mistaken for the genuine CE Mark.

It appears the CE Mark has been illegitimately placed on products which do not require the Mark, giving consumers the false impression that the product is one of quality.

In its self, the CE Mark does not represent a product having undergone safety testing but more a self-declaration mark from the

manufacturer to allow the product's free movement across Europe. The CE Mark's aim is to provide a clear indication that a product meets the requirements of relevant CE marking directives and therefore should not be stopped at Member State borders

Who is responsible?

The CE Marking Directive requires manufacturers to be responsible for undertaking a full risk analysis, complying with essential requirements and ensuring that they can provide evidence of having carried out their responsibilities. If a harmonised standard applies to the product, the manufacturers have a duty to apply it. An additional duty the manufacturer will also now have is to determine if the standard is fully adequate for the product and its environment, or if the product requires further safety testing before being placed on the open market.

Whilst the vast majority of EU manufacturers are very thorough in ensuring they invest in meeting these standards, there has been criticism that manufacturers from a small number of EU member states have not been so rigorous. This has allowed cheaper, potentially unsafe products to enter the market.

How do you achieve Compliance?

Market surveillance authorities across the EU are addressing this area with more active policing of CE Marking. This will lead to a more robust level playing field for manufacturers across the whole of the EU and will make sure

that the CE Mark retains its status as a mark in which trust can be placed.

Achieving CE compliance can be a complex process due to the requirements of individual directives, particularly when combinations of directives apply simultaneously. So, to ensure you are compliant take time to carry out a health check looking at some of the following important areas:

Ensure you have your product Technical Files fully up to date with the correct published standards, regulations and codes of practice identified in standards Register.

Your Declarations of Conformity/ Incorporation are fully correct with the appropriate Standards listed and the correct published dates identified

Your sub- contractors/supply chain have met their responsibilities under the EU Directives particularly when it comes to supplying YOU with their Certificates of Conformity

Any testing conducted either in house or via a 3rd party is valid, and with the appropriate test certificates/test reports and conducted to the appropriate National/European/ International Standards. ■
